S. D. Woodruff & Sons

Orange, Connecticut

1931

J. T. D.

Another New Cannons Variety of Established Merit

Days to maturity, 130-140. This comparatively new variety, named in honor of the late Dr. John T. Dorrance, head of the Campbell Soup Company, was originated by H. F. Hall of that firm. It is classed as a second-early, being a little later but larger than Bonny Best. Its fruit is slightly flattened. The vines are unusually strong for a second early. Under normal conditions it sets and produces a very heavy crop, ripens well around the stem, and does not crack as badly as Bonny Best. It is one of those varieties which can be transplanted in the North as late as June 10.

Per lb., \$2.50; 10 lbs., \$2.25; 50 lbs., \$2.00

Another
New
Tomato

Of The
Marglobe
Type

"BREAK O' DAY"

This is an extremely Important New Tomato in the course of development by the U. S. Department of Agriculture ♦ "Break O' Day" has not been released to the Seed Trade by the Department as yet and is available only for trial. Tomatoes in 50 days from time plants are set out—

"Break O' Day" has been and will continue to be nationally advertised over the Radio through the National Broadcasting Co. Hookup, as a marvelous advance in Tomato Culture. It has been highly praised by the National Garden Bureau, The Atlantic and Pacific Tea Co. and The U. S. Dept. of Agriculture. Many Growers and Shippers as well as Cannerymen believe that it is the coming Tomato. Every Seedsman should carry it.

"Break O' Day" Tomato has caused a sensation in tomato culture. It is an early strain of Marglobe, but distinctively different from either Woodruff's Early Marglobe, just introduced in this book, or the Parent Strain of Marglobe. It was bred by the U. S. Department of Agriculture. IT IS A CROSS BETWEEN MARGLOBE AND MARVANA, MARVANA IS A CROSS BETWEEN MARGLOBE AND EARLIANA, MARGLOBE IS A CROSS BETWEEN LIVINGSTONE'S GLOBE AND MARVEL, an English Tomato, and it is DISEASE RESISTANT. As a result of this Breeding "Break O' Day" is as early as the Earliana, earlier than Bonny Best. It is Disease Resistant. It is a true Globe shaped tomato and nearly as large as Marglobe. The Plant is not quite as Productive, and is more open, like Earliana. It does not afford as much Protection to the fruit as Marglobe.

The great field for "Break O' Day" will be as an Extra Early Tomato of the Marglobe Type. The Seed is very scarce. Ours is grown from the original 1929 Pritchard Selection.

Price: Per Oz., \$1.35; ¼ lb., \$4.00; ½ lb., \$15.00; 5 lbs. at \$14.00 per lb.

INDIANA BALTIMORE

One of the Best Canning and Market Tomato Ever Grown

This Strain was worked up and developed for the Indiana Cannerymen Association and is Disease Resistant. All of the seed has been chemically treated for disease and is Indiana Grown. This old, reliable, and well-known red canning variety is particularly desirable because of its high interior color. The strain we offer is the stock which was developed as Indiana Baltimore by the scientists of Purdue University. Baltimore is not recommended as a shipping Tomato and should not be planted in the far North where the seasons are short. For canning operations in the Tri-State or in the mid-western areas, this strain will give an excellent account of itself.

Per lb., \$2.00; 10 lbs., \$1.85; 50 lbs., \$1.75 per lb.
